# About Us

## Our Goal :

To improve English reading skills and to address the challenge of mastering fundamental math operations such as addition, subtraction, multiplication, and division. We support rural and tribal students, who are first-generation learners and come from economically challenged backgrounds.

**Read-a-story Program:** Under the aegis of n+1, a not-for-profit organization dedicated to education, we work with under-served and disadvantaged students, primarily from the rural interiors of Maharashtra, India. Our initiative focuses on teaching English remotely over the phone and the internet, leveraging a network of dedicated volunteers. The project is currently active across various districts in Maharashtra, and we anticipate expanding the program in Gujarat. Last year, the Bala Mandir Kamraj Trust took over this project in Tamil Nadu.

**Foundational Numeracy Program:** By the end of 4th grade, a student's ability to perform 3-digit division demonstrates a strong foundation in basic math skills—understanding numbers, subtraction, multiplication, tables up to 10, and the ability to follow a division algorithm. At n+1, we focus on improving math education in under-resourced Zilla Parishad government schools, where teachers are often overwhelmed by the volume of math exercises they need to review for each student. Research shows that mastering these basic operations requires solving approximately 1,000 math practice problems. To address this challenge, n+1 has introduced an innovative solution: a math app that provides guided exercises, paired with human interaction. This approach combines the scalability of technology with the personalized attention that students need, ensuring effective learning in these underserved communities.

We partner with Zilla Parishad Schools, other NGOs, and the local community to build a student volunteer network that helps the child get better at English and Math. We aim to provide last-mile connectivity with a human touch.

# Our Programs

*Education is the most powerful weapon which you can use to change the world!*

----- Nelson Mandela

## Read-a-story

Teaching English over the phone /internet with the help of volunteers. Project spread over different districts in Maharashtra. Expansion in Gujarat this year.

## Solve-with-Bharat

Foundational Numeracy

Ability to do 3-digit division by the end of 4th grade. Ability to do division implies that a student knows numbers, addition, subtraction, multiplication, tables till 10 and can follow an algorithm like division and addition.

## Collaborations

Our volunteer pool includes participants from various educational institutions, offering a mutually enriching experience for both the village students & the tutor volunteers. Additionally, we have volunteers from the corporate sector contributing their time & expertise.

## Yuva English

The hostel at Agar in Dahanu, Palghar, is dedicated exclusively for tribal girls attending various colleges. Most of these girls are first-generation learners and the first in their families to attend college. They aspire to learn English but often lack a supportive environment and resources. Yuva English is designed to meet these needs.

# Read-a-story

---

The project began with a simple idea: to use voice calls to connect volunteers with students, providing personalized guidance in reading English. Our initiatives are currently active in Palghar-Talasari and Anvir and Adgaon, the districts of Palghar and Raigad, as well as in Aurangabad, Maharashtra. In Tamil Nadu, the program has been handed over to the Bala Mandir Kamaraj Trust and operates under the name "Happy Reading."

By delivering English education through phone-based instruction with the help of dedicated volunteers, we are implementing an innovative method to reach students in remote areas where conventional classroom education is often unavailable. This approach is particularly valuable in bridging educational gaps using accessible technology. Our volunteers teach students through simple voice calls and, where infrastructure permits, via Google Meet.

Adgaon and Gram Seva Trust are two of our projects that utilize Google Meet for instruction. In Adgaon, sessions are held before regular school hours on the premises, allowing students to learn in small groups within a structured & focused environment.

At Gram Seva Trust, a residential school equipped with laptops, sessions occur in the evenings. This approach has proven effective, leveraging the internet for education while allowing volunteers to actively engage with & support the students' learning journey.

Utilizing volunteers in this way continues to be beneficial, as it helps reduce the burden on teachers & expands the reach of education to more students. Teaching English, in particular, is a crucial skill that can facilitate better employment opportunities for students in the future.

Overall, this project aims to bring education to remote areas by combining technology with personalized tutoring. It has the potential to make a significant & lasting impact on the lives of students in these regions.

## Student Distribution

---

Read-a-story's implementation strategy focuses on partnering with local organizations and building a volunteer network to help underprivileged students improve their English reading skills. This collaborative approach provides key advantages, including a deeper understanding of the students' specific needs & challenges through active community involvement. By engaging volunteers, the program offers personalized guidance, which often proves more impactful than traditional classroom-based instruction.

This academic year, we expanded our reach by continuing to work with students from Anvir through the Yashraj Foundation, Arajpada via the Pusalkar Trust, & with hostel students in Talasari & Agar, as well as students supported by the Savitribai Phule Mahila Ekatma Mandal (SPMESM). In addition, we expanded our program in new regions, including Kharel, Gujarat, through the Gram Seva Trust, & Parbhani, in collaboration with Gram Vikas Gatividhi.

## Arajpada, Talasari, Maharashtra

The Read-a-story program is designed to enhance English reading skills among underprivileged children in Talasari taluka, utilizing a blend of technology and personalized tutoring. With the region's literacy rate at just 44%, the program aims to provide one-on-one English tutoring over the phone, helping each student develop into a self-learner.

In the Read-a-story innovative approach, students read from a physical storybook to their assigned tutors who have a digital version of this book. Tutors assist with pronunciation, punctuation, and vocabulary in an interactive one-to-one phone session.

The program features vibrant storybooks from Pratham Books, volunteer tutors, and a cloud telephony system to ensure safe and secure communication. Independent evaluations have validated the program's effectiveness, with each phase demonstrating measurable success.

The program has successfully completed three phases: a prototyping phase with 10 students, a pilot phase with 100 students, and a larger pilot with 200 students, followed by an expanded phase involving 500 students, and now onto 1000 students. Each phase showed substantial improvements in students' reading outcomes, affirming the program's impact.

## Gram Seva Trust, Kharel, Gujarat

Gram Seva Trust, founded by Dr. Ashwinbhai Shah and Dr. Harshaben Shah in 1994, has been a beacon of hope and service in South Gujarat, particularly benefiting the tribal communities of Navsari, Surat, & the Dang districts. With a foundation built on transparency, good governance, simplicity, & accountability, the trust has successfully completed 25 years of impactful service.

In collaboration with Gram Seva Trust, Read-a-story launched a pilot batch in Gujarat, aiming to leverage technology, the internet, & a personal touch to extend the program's reach. Volunteers with basic proficiency in Gujarati or Hindi were invited to join this meaningful mission, focused on helping tribal children enhance their English literacy & educational prospects. The sessions were held every Tuesday & Thursday via Google Meet, with 22 students & 10 volunteers participating. Students were divided into pairs or small groups of two or three. The pilot program was a success, resulting in a significant improvement in the students' English reading skills as 100% of the students went at least one level up.

## Adgaon, Maharashtra

In the small village of Adgaon, located in the Konkan region, an innovative internet-based education program has been successfully launched for local students. Before the regular school day begins, 64 students attend online classes in two batches at the school. These sessions facilitated through Google Meet, connect 2-3 students with volunteers for interactive, personalized learning. Thanks to the generosity of Mr. Chetan Patwardhan, who has provided essential infrastructure, including fiber-optic internet, laptops, & tablets, the program could be implemented. He has also appointed a local coordinator to ensure seamless operations. This initiative has significantly enhanced educational access, leading to a 64% improvement in learning outcomes.

However, some challenges have emerged, such as changes in school management, increased student absenteeism, & the need for more engagement with school authorities & parents to restore attendance levels. Additionally, there remains a lack of awareness about the importance of education, so making ongoing efforts with parents is essential to shift their mindset & prioritize their children's education.

## Yashraj Foundation, Anvir, Maharashtra

In collaboration with the Yashraj Foundation (YRF), we launched a program in the village of Anvir to connect volunteers with students via voice calls. However, frequent network issues led us to reconsider this approach. Inspired by the Adgaon model, we adopted a similar strategy in Anvir, but instead of using laptops or tablets, we provided basic hand sets, which were generously donated. The Read-a-story program is held on Saturdays after school & on Sundays, with two sessions each day. The YRF program enrolled 60 students, who were paired with around 40-45 volunteers.

### Hostels- Agar & Talasari

The Tribal Girls Government Hostels in Agar & Talasari, located in Palghar, serve as vital residential facilities for tribal girls pursuing higher education at various colleges in the Talasari region. These girls are often first-generation learners, & for many, the first in their families to attend college. Managed by the government through the Integrated Tribal Development Project, the hostels provide free boarding & lodging, ensuring these young women have a secure place to live while they focus on their studies.

Each hostel has a capacity of approximately 200 girls, who are enrolled in 11th & 12th grades, as well as 1st, 2nd, & 3rd-year college programs across arts, commerce, & science streams. Despite the hostels being located 2 kilometers from the main town, the girls regularly walk to their colleges & other places within a 3-4 kilometer radius.

Recognizing the critical importance of English proficiency for future career opportunities, Read-a-story introduced an English reading program at both hostels. This initiative aims to help the girls strengthen their English language skills, which are essential for their academic success & broader career prospects. With a focus on empowering these young women, the program has been well-received, & Read-a-story plans to expand it to other hostels in the near future, further supporting the educational aspirations of tribal girls in the region.

# Savitribai Phule Mahila Ekatma Mandal (SPMESM), Maharashtra

Savitribai Phule Mahila Ekatma Mandal (SPMESM) and Read-a-story (RAS) share a common mission to enhance English reading proficiency among first-generation learners from rural backgrounds. These students, who come from marginalized communities, often face educational challenges due to their socio-economic conditions. Most of the children's parents are employed as farmers or laborers, making it difficult for families to provide academic support at home.

The joint program between SPMESM and RAS currently enrolls 350 students, offering personalized English tutoring to help bridge the learning gap. A significant portion of the students are from farm laborer families, where parents earn modest wages through daily work in nearby fields. Others come from small farmer households, where their parents manage family-owned farms. Given these backgrounds, access to quality education, particularly in English, is limited.

The program aims to break this cycle by providing tailored educational support and empowering these young learners with the skills they need to improve their reading proficiency. By focusing on English, a subject often perceived as a gateway to broader opportunities, SPMESM and RAS are helping these students gain confidence, enabling them to pursue further academic and professional success.

At Read-a-story, level setting is a key process to ensure that students are paired with appropriate reading materials and volunteers. This evaluation involves assessing each student's English reading ability and assigning them a corresponding level. By understanding their proficiency, we can customize our teaching approach to ensure students are sufficiently challenged to make progress without feeling overwhelmed. In response to the challenges posed by the pandemic, Read-a-story adapted its evaluation process. While in-person assessments may not always be feasible, conducting evaluations over the phone has proven to be an effective and innovative solution, allowing us to continue supporting students remotely.

*Education's purpose is to replace an empty mind with an open one.*  
– Malcolm Forbes

### Levels :

- Beginner: Can read alphabets; but will need help with simple words.
- L0- Can read simple words; but will need help with simple sentences.
- L1- Can read simple sentences; but not complex sentences.
- L2-Can read harder sentences; but paragraphs may be difficult.
- L3- Can read paragraphs.
- L4 - Can read and comprehend paragraphs and has achieved a self-learner state.

## Student Testimonials

*Thanks to the English classes, I scored 41 out of 50 on my school English test.*

*I'm very happy and grateful to my teacher for helping me achieve this.*

**\*Mira Bhaskar Thombre**

*Since the online classes began, I have improved my English reading skills. I scored 48 out of 50 on my school test.*

*I am thankful to all of you for your support. Thank you!*

**\*Sakshi Tukaram Thombre**

*With the start of online classes, my progress in English has been very good. I scored 20 out of 20 on my test.*

*I am very grateful to the entire staff and hope to continue gaining such knowledge*

**\*Shivani Dilip Thombre**

*\*Sometime people from the same village have similar/same surname*

# VOLUNTEERS

Volunteers are the lifeblood of our Read-a-story program, playing a crucial role in teaching and empowering students across various regions. We've been fortunate to have dedicated volunteers not only from different parts of India but also from around the world, including the US, South Africa, UAE, Singapore, and the UK. Despite time zone differences, these committed individuals consistently make time to connect with their students, offering personalized support and helping spread the word about our mission. Their global reach and passion are key to driving the success of our program and making a lasting impact.

Along with these we also have volunteers from various educational institutions and corporations.

# Strategic Collaborations

The Read-a-Story (RAS) initiative actively recruits volunteers from diverse educational backgrounds across India. This collaboration creates a mutually enriching experience, benefiting both RAS students in rural areas and urban volunteers. For many city-based participants with limited exposure to village life, involvement in RAS raises awareness of the challenges faced by a significant portion of our population, fostering empathy and deeper understanding.

870+

Volunteers

We are pleased to have established connections with 15 schools & colleges, not only within Pune but also beyond. Our program's accessibility is highlighted by the simple requirement: a willingness to help, which can be fulfilled with a phone call from anywhere. Upon completing 12 hours of reading with RAS students, these volunteers receive a certificate recognizing their contribution.

# Volunteer Testimonials

**Rashmi Nair**

*I have been associated with Read a story for about 2 years now. It started with interacting with the students over the phone. I will never forget the 7 am classes with Kartik, a 5th grader, who wouldn't even have had his tea or breakfast but had all the enthusiasm to read and learn English. When I asked, Kartik what he wanted to be when he grew up, he spontaneously replied that he just wanted to speak good English! I just hope I was able to help him achieve this. I am truly grateful that I got the opportunity to interact and teach these students.*

**Ahaan Mashruwala**

*Working as a volunteer at n+1 Read-a-story has been incredibly fulfilling. I found the flyer circulated over 7 months ago, and I'm proud to say I have been a part ever since. This opportunity to empower young minds and help them learn has made me a better teacher and learner. Being still in school, I am able to appreciate the importance of good education, and this allows me to help others close to my age gain access to it as well. The team at n+1 is always ready to help, support, and guide me throughout this teaching journey of mine and the learning journey of the children I teach. Truly grateful!*

# Volunteer Testimonials

**Twisha Rawat**

*Being a volunteer for Read-a-story has been an extremely rewarding experience. Coming from a family that emphasizes on education and strongly believes in sharing knowledge, Read-A-story has given me the rewarding experience of teaching children English. By helping students who aren't very privileged gives me a sense of fulfillment and happiness, and I am so glad that through Read-a-story I am able to give back to society. Apart from this, the staff is extremely supportive. They help you out whenever you run into troubles and provide all the instructions and resources very well, making the teaching experience easier.*

**Supriya Deshmukh**

*It is a pleasure to connect with our students in Adgoan. Our students are enthusiastic and eager to learn. I believe we teach not only English but valuable life skills in the form of confidence to fearlessly interact with people out of their comfort zone. and we recieve the quiet satisfaction of contributing, 'खारीचा वाटा' in return.*

*Best wishes to Read a story for many more endeavors and successes.  
Supriya Deshmukh.*

# Volunteer Testimonials

**Varunika Rajput**

*I volunteered last year with the READ A STORY program. The objective was simple- Help the underprivileged children/ children from remote areas to read, build their confidence, and somewhere along that road, meet life.*

*I was latched to the children from Adgaon, a remote village in Maharashtra. I would get into a Zoom call with them twice weekly and conduct reading sessions. Amidst a patchy network and an acute communication gap, we read together. I have picked up a few Marathi words in the process apart from their endearing smiles towards the end of the session. It's a win-win situation.*

*While my association with the program is just a few months old, it has been one of the most fulfilling experiences of my life. A lot needs to be accomplished but the term has ended. Their summer vacations have begun. I will see them hopefully in July.*

*Becoming a part of this program has made me realize one thing - We can claim to be educated and take pride in being learned but if we are not using our education to create a better world, it is meaningless then. I thank the team of READ A STORY for gracing me with the opportunity of doing so.*

*It's easy to count the problems. Being a part of the solution is what demands courage. and the READ A STORY team is doing an incredible job at that!*

*Thank You and forever grateful!*

*Look forward to being a volunteer for the next term.*

*Best Wishes,*

*Varunika Rajput*

# Solve-with-Bharat

**Foundational Numeracy** - Mathematics poses a significant challenge for rural tribal students, who often struggle due to limited practice and access to qualified teachers. Weak foundational skills make it hard for them to grasp more complex topics, leading to disinterest and higher dropout rates. Our program addresses this by using technology to scale while ensuring personalized attention to keep students engaged and motivated. This program is active in Palghar district of Maharashtra.

## Girgaon, Palghar District

Here is an overview of the analysis conducted on foundational numeracy skills with 500 tribal students in Girgaon, Talasari. It outlines the baseline, formative, and endline assessments, focusing on the program's emphasis on strengthening the four core math operations—addition, subtraction, multiplication, and division—through mobile-based learning facilitated by community youth. The program demonstrated statistically significant outcomes, with a 2.26 standard deviation improvement from baseline to endline assessments, a 50% increase in competency levels, and learning gains observed in 97.5% of the students.

**Program Details:** The initiative targets tribal children from 2nd to 6th grade, employing five locally trained facilitators equipped with mobile phones for interactive sessions with groups of 20 students each, conducting about 6 sessions per day i.e 100 students per day. This personalized learning approach blends technology with human interaction.

**Evaluation:** Baseline & end-line assessments were conducted over a 10-month period, with intermittent formative assessments using random sampling. Statistical tests, including the 'z-one mean test,' were employed to validate results, with 32 sums administered across eight categories for consistent evaluation.

**Learning Outcomes:** Four learning outcomes were measured, encompassing improvements in student percentages, competency levels, hypothesis testing & mean score movements.

**Program Insights:** Operational efficiency, resource constraints, & weather-related challenges were observed, along with student drop-out classifications.

**Unique Selling Points:** The program's success is attributed to its integration of technology with human interaction, leveraging mobile phones as familiar tools. Moreover, it is cost-effective & demonstrates substantial learning gains over a short period, with scalability facilitated by community engagement.

**Conclusion:** The program has shown a strong association between numeracy skill improvement & facilitated practice sessions. It is both cost-effective & scalable, offering significant learning gains at the foundational level.

**Next Steps-Scaling:** Plans to scale the program to 5000 students & 50 facilitators over the next two years are contingent upon getting funding support.

## Solve-with-Bharat

The chart below shows the efficiency & sums solved per student per week from the start to the end of the program. We averaged efficiency at 66.66% (after taking the Ganapati & Diwali holiday vacation into account).

Sums per student

### Learning outcome - Percentage of students that have improved:

The chart below details the percentage of students that have improved over the different formative assessments. FAX is a formative assessment, where we randomly sample 100 students & take measurements. This is done about every 7 weeks.

Competencies improvement

Normalised scores Vs Evaluation time

## Anvir, Palghar District

The program in Anvir, Talasari, conducted in collaboration with the Yashraj Research Foundation, focused on improving the foundational numeracy of 330 tribal students. Through baseline, formative, and endline assessments, the initiative aimed to strengthen core math skills—addition, subtraction, multiplication, and division—via mobile-based exercises facilitated by local youth. The program achieved statistically significant outcomes, with 88.6% of students showing notable improvements in competency and learning gains.

### Key Program Details:

- Targeted tribal children from grades 2nd to 8th.
- Implemented in four schools in Anvir village.
- Utilized local college graduates as facilitators equipped with mobile phones & a practice app.
- Facilitators conducted classes of 20 students, providing personalized assistance during practice sessions.

### Program Highlights:

- Marrying technology with human interaction proved effective.
- Utilizing mobile phones enhanced engagement & ease of use.
- Cost-effective program with substantial learning gains.
- Demonstrates scalability & potential for expansion.

### Evaluation:

- Conducted baseline & endline assessments with formative assessments in between.
- Utilized statistical tests to determine learning gains & significance.
- Observed notable improvements in competency & mean scores.

### Learning Outcomes:

1. Demonstrated significant improvement in student competency & learning impact.
2. Highlighted the effectiveness of blending technology with personalized learning.

### Conclusion:

- The program effectively improved foundational numeracy among tribal students, showcasing its cost-effectiveness & scalability.
- Future plans involve scaling up to reach more students & seeking additional funding support.

# Community Facilitators

Our community facilitators are essential to our Solve-with-Bharat Foundational Numeracy initiative, serving as both educators and role models in their communities. During the day, they are actively involved in schools, providing personalized attention to students and closely monitoring their progress. In the evenings, these facilitators attend online classes, preparing for competitive exams such as banking and government services—opportunities that were once out of reach due to limited resources.

This creates a win-win situation: students receive the tailored support they need to thrive, while local graduates gain access to education and career advancement. This dual benefit fosters both student success and personal growth for the facilitators, contributing to the overall development of the community.

## Other Activities

n+1 Social Foundation provided coloring kits and T-shirts to the students of Arajpada School, who were recently honored by Rangotsav Sansthan for their achievements in arts.

Over 100 students participated in national painting and collage competitions, with Kumari Anjali Surji Khebla winning the Art Merit Award, Principal Pramod Sonawane receiving the Leader of Excellence in Cultural Activities Award, and Art Teacher Vinesh Dhodi being honored with the Kalabhushan Award.

The school also received the National Icon Award.

# Road Map

# Where we are today

Read-a-story and the Foundational Numeracy programs have made remarkable progress in empowering rural and tribal students with essential skills. In English literacy, the Read-a-story program now supports over 1,000 students across Maharashtra, offering personalized English tutoring through a blend of technology and human interaction.

The Foundational Numeracy initiative is tackling critical gaps in basic math skills within Zilla Parishad schools. Supported by community facilitators and a custom math practice app, the program is helping over 2,000 students strengthen their numeracy skills. To ensure impact and continuous improvement, Indian Institute of Technology-Bombay (IIT-B) is conducting the monitoring and evaluation of the program. Both initiatives reflect our commitment to building a strong educational foundation, equipping young learners for long-term academic success.

## Where we are going

Read-a-story and Foundational Numeracy are poised for further expansion and impact as we look to the future. Our goal is to reach even more students in rural and tribal areas, scaling our English literacy and Math programs to ensure that every child, regardless of their background, has access to quality education.

We plan to introduce more interactive learning tools for Read-a-story, expand our volunteer network, and implement additional reading programs in underserved regions. In the Foundational Numeracy program, we aim to deepen our engagement in Talasari and other areas by enhancing our math practice app, increasing community involvement, and collaborating with more educational institutions to ensure continued improvement in basic numeracy.

Ultimately, our vision is to create a model that can be replicated across multiple regions, providing students with the foundational skills needed to succeed in school, prepare for competitive exams, and, eventually, thrive in the workforce. Through these efforts, we are not just teaching subjects—we hope to build a pipeline of capable, empowered learners who will shape the future.

# Our Funders

We want to take this opportunity to express our deep appreciation to our funders. Their financial support and shared belief in our mission has enabled us to create impactful educational experiences for over 1,600 volunteers and more than 1,000 students. Thanks to their commitment, our programs have grown, providing enriching and transformative opportunities for both students and volunteers alike. We extend our heartfelt thanks once again and look forward to many more years of fruitful collaboration and continued growth.
